

The Portable Edge band Machine comes with a hotmelt adhesive reservoir for moulding parts. It is ideal for usage in workshops, construction sites and even fairs or exhibitions.

When this machine is used on smaller-sized wooden boards, it can be fixed on a stand with a conveyor table, while the process of edge banding is the same for normal-sized boards.

When this machine is used on bigger wooden boards and half-finished wooden products, the bigger boards and half-finished wooden products must be fixed in place. Then, the Portable Edge Band Machine can proceed, and the entire edge of the wooden board must be clear without obstacles during the process.

- ❖ For cambered and straight workpieces
- ❖ Easy and fast setting up
- ❖ One-man operation
- ❖ Electric drive and automatic feed

### Technical Specifications

<b>Voltage</b>	220 v / 110 v	<b>Glue reservoir capacity</b>	330 ml
<b>Max. edge height</b>	45 mm	<b>Heating time (depending on granulate)</b>	15 min
<b>Edge thickness</b>	0.4 - 3 mm	<b>Weight</b>	11 kg
<b>Feed rate</b>	4m /min	<b>Glue melting point</b>	130° - 180°
