

■ Scanwolf's kitchen leg is height adjustable with a perfect combination of block, leg and plinth fixing. Made of plastic, it has a diameter of 60mm and is available in black colour. While having an exceptional load bearing capacity, it also ensures that the leg is securely held in place during the mounting and moving of your table or cabinet. Its adjustability means that it can be adapted to any type of ground or uneven surface, making sure that you get better support because your kitchen furniture is always level with the ground.
